

The following information was provided to the Kansas Legislative Research Department on November 13, 2014, by Mitzi McFatrach, Executive Director, Kansas Advocates for Better Care, in response to a Committee request made at the August 12, 2014, Committee meeting. Data for all states was provided, but only the notes and Kansas data have been copied for review.

Ms. McFatrach also provided the following update: For the committee's information, the most recently quarterly data released (Quarter 2 for 2014) showed KS is at 46th worst/highest usage of anti-psychotics in state rankings. Additionally CMS has set new goals of 25% reduction by Dec of 2015 and 30% reduction by Dec of 2016.

Notes pertaining to Excel spreadsheet:

Data updated on July 1, 2014

Three quarter QM values are averaged over 3 quarters, and weighted by the denominator in each quarter

Both the long-stay and short-stay measures exclude residents with Schizophrenia, Tourette's syndrome, or Huntington's disease

Each tab presents data for all facilities in the state, sorted by descending three-quarter prevalence of long-stay resident antipsychotic medication use

These tables can be sorted or filtered on any of the columns to meet the user's needs

A missing value (NA) for the quality measure indicates that the facility either did not have enough residents to be included in the denominator (this is equal to 30 residents for the long-stay measures and 20 residents for the short stay measures), or that the score was missing for that facility

When printing, it is important to adjust the page break first. It may also be helpful to make the page layout landscape and 1-page wide

Please contact Ed Mortimore (410-786-2640) with questions

Partnership to Improve Dementia Care in Nursing Homes Antipsychotic Drug use in Nursing Homes Trend Update

The National Partnership to Improve Dementia Care in Nursing Homes is committed to improving the quality of care for individuals with dementia living in nursing homes. The Partnership has a mission to deliver health care that is person-centered, comprehensive and interdisciplinary with a specific focus on protecting residents from being prescribed antipsychotic medications unless there is a valid, clinical indication and a systematic process to evaluate each individual's need. The Centers for Medicare & Medicaid Services (CMS) promotes a multidimensional approach that includes; research, partnerships and state-based coalitions, revised surveyor guidance, training for providers and surveyors and public reporting.

CMS is tracking the progress of the Partnership by reviewing publicly reported measures. The official measure of the Partnership is a the percent of long-stay nursing home residents who are receiving an antipsychotic medication, excluding those residents diagnosed with schizophrenia, Huntington's Disease or Tourette's Syndrome. In 2011Q4 23.9% of long-stay nursing home residents were receiving an antipsychotic medication; since then there has been a decrease of 17.1% to 19.8% in 2014Q1. Success has varied by state and CMS region, with some states and regions having seen a reduction of greater than 20%.

A three-quarter measure is posted to the Nursing Home Compare website at www.medicare.gov/nursinghomecompare. The long-stay measure on Nursing Home Compare, is the exact same measure as below, except each facility's score is averaged over the last three quarters in order to give consumers information on the past history of each facility.

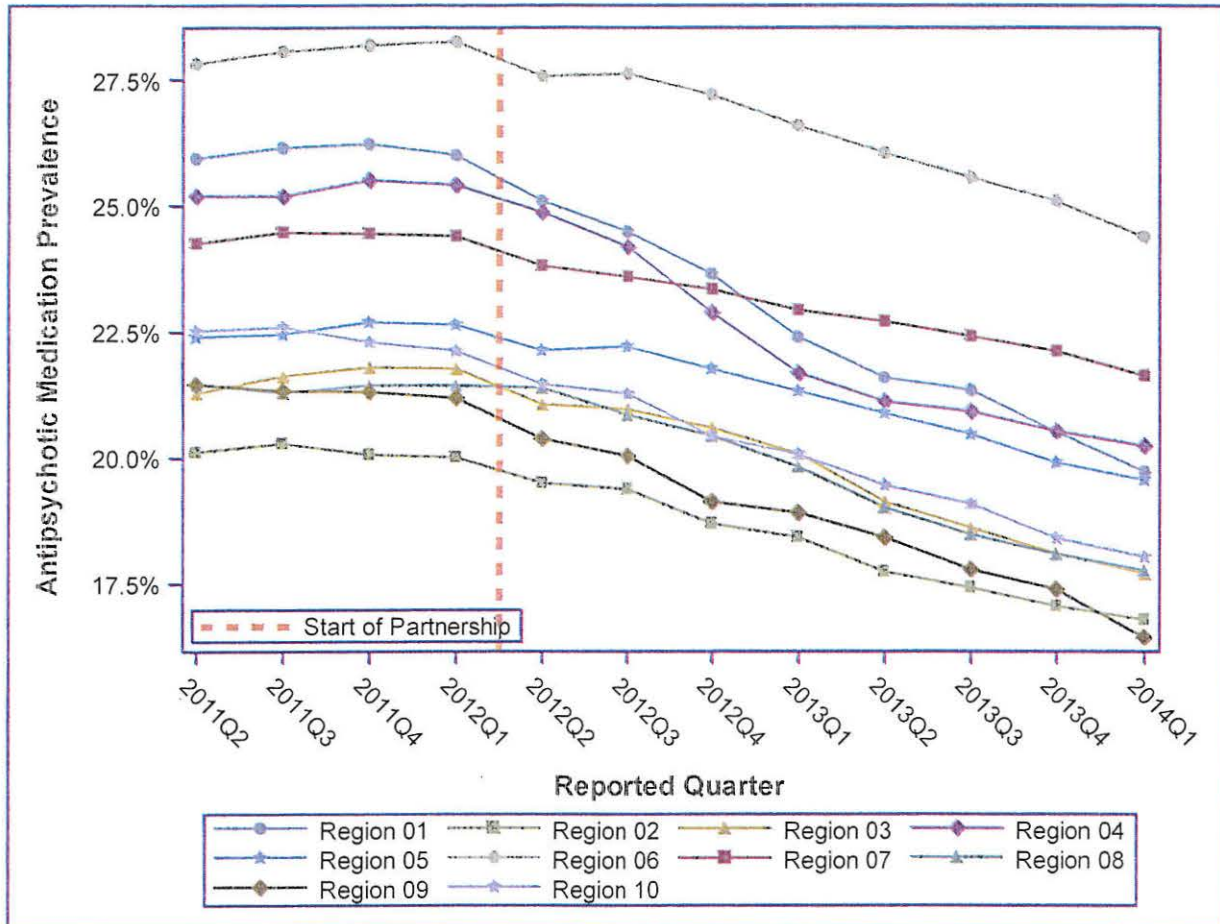

For more information on this National Partnership, please send correspondence to dnh_behavioralhealth@cms.hhs.gov.
